Marquand, MO 63655

Dear Stephen & Deborah,

I think you both might be interested in the enclosed slides, they are of an unique exhibit which I recently completed for the Bank of America. You should be happy to know that I used several of your recycled plastic products, prominently, in the exhibits construction.

The exhibit, Life on Earth - Rethinking the Future, is an educational exhibit about the rain forest and our environment.

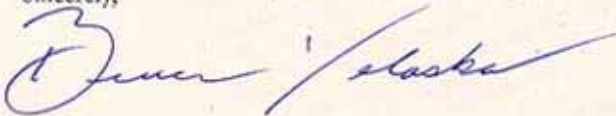

The exhibit is made from a variety of materials including recycled plastics, metals and papers along with organic materials including bamboo and fibers. The structures themselves are designed to reflect the trees of the rain forest.

Throughout the exhibit actual artifacts, photos and products of the rain forest are displayed. Issues like closed loop recycling are demonstrated by a pylon made from recycled soda pop cans. Future hope is represented by a clear globe floating on a column of air produced by a solar powered fan.

The exhibit, which is sponsored by Bank of America with technical assistance from Conservation International, will travel throughout California and the west coast for the next two years at various Bank of America locations.

Please call me if you have any questions or would like more information. I would also like to know what your up to.

Sincerely,

Bruce Yelaska
